PROFESSIONAL SUMMARY

Computer Engineering student (final semester, graduating Dec 2026) with hands-on experience delivering full-stack web applications for real clients — POS systems, business websites with admin panels, and analytics dashboards processing 40,000+ records. Also ships independent open-source software: published a React component library to npm with 118 tests and ~99% statement coverage. Proven ability to lead software teams through the complete SDLC and ship production-ready solutions within 2–6 week cycles. Solid low-level CS foundation (C/C++, x86 Assembly, compilers). Adaptable to new stacks and technologies — I build systems where every layer matters, from hardware to the end user.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, C, C++, x86 Assembly, HTML5, CSS3, Python
Frontend	React (v19), Vite, TanStack Query, React Router v7, CSS Modules, Storybook
Backend & Data	Supabase (PostgreSQL), FastAPI, REST APIs, WebSockets, TimescaleDB, SQL
ML / Data	scikit-learn, TensorFlow/Keras (LSTM), pandas, numpy, Google Colab
DevOps & Tools	Git, GitHub Actions (CI/CD), Docker Compose, npm publishing, Figma, UML
OOP & Systems	Strong OOP fundamentals in C++ (transferable to Java and other class-based languages)
AI / GenAI	LLM API integration (OpenAI / Anthropic), prompt engineering, RAG fundamentals

RECENT PROJECTS

SuriUI — Open-Source React Component Library 2026 · ~3 weeks

Stack: React · TypeScript · Vite · Storybook · Vitest · React Testing Library · GitHub Actions · npm

- Designed and shipped 9 accessible UI components from scratch; published as [@suribef/suri-ui](#) on npm — a publicly installable, versioned package.
- 118 unit tests with ~99% statement coverage; CI/CD pipeline via GitHub Actions runs on every push.
- Authored 20 Architecture Decision Records (ADRs) documenting real trade-offs: CSS Module hashing, aria-live pre-mounting, Vite vs Rollup for library bundling, and more.
- Deployed Storybook documentation site. All decisions and rationale are publicly verifiable in the repository.

CryptoLens — Real-Time Crypto Analytics Dashboard 2026 · ~8 weeks

Stack: React · TypeScript · FastAPI · TimescaleDB · WebSockets · scikit-learn · TensorFlow/Keras

- Full-stack platform consuming two simultaneous Binance WebSocket streams via a FastAPI proxy with ConnectionManager fan-out architecture.
- Designed TimescaleDB hypertable schema for high-frequency time-series data with automatic compression.
- Trained ML pipeline: Random Forest baseline + LSTM neural network for short-term price prediction using Walk-Forward Validation.
- TradingView Lightweight Charts for real-time candlestick rendering. ML model complete; frontend integration in progress.

PetPoint — Point of Sale System 2026 · ~6 weeks

Stack: React 19 · Vite · Supabase (PostgreSQL) · TanStack Query · React Router v7

- Led a 5-person team through the full SDLC: requirements gathering, system design, implementation, and testing.
- Designed relational database schema, UML diagrams (use cases, sequence, class), and a complete test plan.
- Supports 10+ concurrent users with real-time data sync via Supabase realtime subscriptions.
- Managed communication between technical contributors and non-technical stakeholders throughout the project.

Arithmetic Expression Compiler 2025 · ~4 weeks

Stack: C++

- Complete compiler pipeline: lexical analysis, recursive descent parser, AST construction, and executable instruction generation.
- Applied low-level CS concepts: memory management, call stack mechanics, x86 registers, software-to-hardware execution flow.

EDUCATION

B.Eng. in Computer Engineering — IPN ESIME Culhuacán 2023 – Dec 2026

Relevant Coursework: Data Structures & Algorithms · Operating Systems · Computer Architecture · Compilers · Computer Networks · Databases · Software Engineering · OOP

CERTIFICATIONS & CONTINUING EDUCATION

- AWS Cloud Practitioner — Amazon Web Services · In Progress
- Software Engineering Professional Certificate — Coursera · In Progress
- Google Project Management Certificate — Coursera · In Progress
